New Anatomical Work 168

ADVERTISEMENT.

HAVING brought to a conclusion, six volumes of the Philadelphia Medical Museum, the editor has thought proper to commence a new series of the same work: whilst he sincerely acknowledges the great kindness of his friends and the medical public, in thus patronizing it through a succession of nearly six years; he feels himself impelled to request a continuation of those exertions, which have enabled him to extend it to the present period. It is incumbent upon him, to point out, that it is chiefly by the assistance he derives from others, that such a work can be conducted with advantage to its readers. It is not the mere subscription of two dollars per annum, which will extend its utility; this can alone satisfy those expenses necessarily attendant on its publication. Substantial and useful as this is to the *publisher* when duly paid; it is not the assistance which is most requisite to the *editor*. It is that which is derived from the head, through the instrumentality of the pen, which he calls for; at the same time, it is obvious that both are

essential to the welfare of the work. The publisher requires that aid, which affords a corporeal, the editor that, which gives an intellectual repast;—*verbum sapienti.*

The work will be conducted pretty generally upon the plan heretofore pursued. It is requested that such gentlemen, who wish to be considered as subscribers to this new series, will transmit their names as early as possible to the publishers, Messrs. J. & A. Y. Humphreys, 'Change-walk, Philadelphia; (by letter post paid) or to the different agents throughout the Union, as directed on the cover, with a particular direction, to enable the work to reach them, with punctuality and dispatch. This is requisite from its passing into the hands of those who are unacquainted with the residence of the former subscribers.

The numbers will be regularly delivered to the city Subscribers at their respective dwellings.

PHILADELPHIA, *April* 1*st*. 1810.
